CONTENTS

PREFACE

CHAPTER 1  INTRODUCTION
George Gelauff, Luuk Klomp, Stephan Raes and Theo Roelandt

1. Introduction
2. Outline
3. Individual chapters
   References

CHAPTER 2  AN INTERNATIONAL COMPARISON OF PRODUCTIVITY PERFORMANCE: THE CASE OF THE NETHERLANDS
Piet Donselaar, Hugo Erken and Stephan Raes

1. Introduction
2. Productivity performance at the macro level
   2.1. Levels of productivity
   2.2. Productivity growth
   2.3. Total factor productivity growth
3. An analysis at the industry level
   3.1. Productivity level and growth in the Netherlands by sector
   3.2. International benchmark
   3.3. Do (changes in) sector structure differences matter?
4. Future productivity growth
5. Conclusion
   References
   Appendix
CHAPTER 3

THE MEASUREMENT OF PRODUCTIVITY: WHAT DO THE NUMBERS MEAN?

Bart van Ark

1. Introduction
2. Measurement of labour productivity and total factor productivity growth
   2.1. The main objectives of measurement of productivity growth
   2.2. Concepts of labour productivity and total factor productivity growth
   2.3. Data sources for productivity measurement
   2.4. Accuracy of the aggregate measures of productivity growth
3. Measurement of comparative productivity levels
   3.1. The main objectives of measurements of productivity levels
   3.2. Purchasing power parities and accuracy of aggregate productivity level estimates
   3.3. Measurement of purchasing power parities and productivity levels by industry
4. Measurement of productivity at industry level
   4.1. Manufacturing output measures
   4.2. Input measurement in manufacturing
   4.3. Input measurement in services
   4.4. Service output measures
   4.5. Improvements in measurement methods
5. Measurement issues related to intangible capital
   5.1. Conceptualisation of intangible capital
   5.2. Measurement of intangible capital
6. Conclusion
References

CHAPTER 4

HELPING THY NEIGHBOUR: PRODUCTIVITY, WELFARE AND INTERNATIONAL TRADE

Niek Nahuis and Ben Geurts

1. Introduction
2. Productivity, comparative advantage and the terms of trade
3. Implications of recent trade and growth theory
   3.1. Modern trade models: product differentiation
   3.2. Country specific circumstances and competitiveness
   3.3. New growth theory
4. Some empirical evidence
   4.1. The welfare effects of the ICT revolution
   4.2. The relation between productivity growth differences on relative price changes
5. Conclusion and policy implications

CHAPTER 5 R&D AND INNOVATION: DRIVERS OF PRODUCTIVITY GROWTH
Piet Donselaar, Hugo Erken and Luuk Klomp

1. Introduction
2. Analytical framework
3. Innovation and productivity: review of the literature
   3.1. Effects of innovation in the empirical literature
   3.2. Related determinants: ICT, human capital and entrepreneurship
4. Contribution of innovation to productivity growth
   4.1. Structural contribution of innovation to productivity growth
   4.2. Actual contribution of innovation to TFP growth in the Netherlands in the 1990s
   4.3. Role of the level of R&D intensity
   4.4. Potential contribution of a structural increase in the private R&D intensity on the level of TFP and labour productivity
5. Conclusions, policy implications and future research
   5.1. How may the government stimulate R&D activities among firms?
   5.2. Future research: a model integrating the impact of drivers of productivity growth?

References

CHAPTER 6 ICT AND PRODUCTIVITY
Henry van der Wiel and George van Leeuwen

1. Introduction
2. ICT and productivity: theoretical background, empirical models and data
   2.1. Theoretical background
   2.2. Empirical models
   2.3. Data
3. Empirical evidence on aggregated levels
   3.1. An international comparison
CHAPTER 9 INTEGRATING EVIDENCE ON THE DETERMINANTS OF PRODUCTIVITY

Eric Bartelsman and Henri de Groot

1. Introduction 159
2. Empirical evidence on productivity 160
3. Growth accounting 161
4. Cross-country growth empirics: convergence 161
   4.1. Describing cross-sectional productivity developments: \( \sigma \)-convergence 162
   4.2. Unconditional \( \beta \)-convergence 164
5. Cross-country growth empirics: finding productivity determinants 164
   5.1. The growth accounting counterpart 165
   5.2. Barro regressions 165
6. Evidence from convergence with productivity frontier 168
7. Resource reallocation and aggregate productivity 171
8. Integrating the evidence: a rough sketch for a model 171
   8.1. Firm-level choices and market interactions 172
   8.2. Qualitative effects of productivity determinants 174
   8.3. Choice of innovation strategy 174
   8.4. Within-firm innovative activity, capital accumulation and growth 176
9. Quantification of the underlying determinants of growth 178
10. Conclusion 180
    References 180
    Appendix: Data 183

CHAPTER 10 FOUR SOURCES OF INNOVATION AND STIMULATION OF GROWTH IN THE DUTCH ECONOMY

William Baumol

1. Analysis for public sector growth and innovation policy: introduction 185
2. Indicators of the magnitude of the free-enterprise growth miracle 187
3. Market pressures for an enhanced large-firm role in technical progress 189
4. Revolutionary breakthroughs: a small-firm specialty 190
5. Revolutionary consequences of aggregated incremental improvements 192
6. On the role of government and the university in innovation 193
7. Dissemination of invention and rapid termination of the obsolete 194
8. The invaluable contribution of “mere imitation” 196
9. Concluding comments 197
References 198

CHAPTER 11 MARKET STRUCTURE, INNOVATION AND PRODUCTIVITY: A MARRIAGE WITH CHEMISTRY 199
Erik Brouwer, Harry van Dalen, Theo Roelandt, Martin Ruiter and Henry van der Wiel

1. The chemistry of competition and innovation 199
2. Searching for the optimal market structure 201
   2.1. Views of the young Schumpeter: Mark I 201
   2.2. Views of the old Schumpeter: Mark II 201
   2.3. Empirical testing of Schumpeter’s views 202
   2.4. The need for dynamic models 202
3. Coping with the endogeneity problem 204
4. What do we know about the Netherlands? 206
   4.1. Recent changes in Dutch innovation and competition policies 206
   4.2. Competition and innovation: empirical evidence for the Netherlands 207
5. Concluding remarks and policy implications 208
References 210
Appendix: Static and dynamic efficiency 212

CHAPTER 12 FIRM DYNAMICS AND LABOUR PRODUCTIVITY 213
Wim Verhoeven

1. Introduction 213
2. Discussion of the literature 214
   2.1. Decomposition of aggregate labour productivity growth 214
   2.2. Labour productivity of start-ups and post-entry firms 217
   2.3. The labour productivity of exiting firms 218
   2.4. Expansion and contraction of firms 219
   2.5. Firm age 220
3. Effects of changes in firm dynamics on aggregate labour productivity 224
   3.1. The theoretical framework of aspects influencing incumbents 225
3.2. Case 1: Effects of changes in characteristics of start-ups 226
3.3. Case 2: Effects of changes in characteristics of fast-growing firms 232
4. Conclusions 237
References 237

CHAPTER 13 THE CONTRIBUTION OF BUSINESS SERVICES TO AGGREGATE PRODUCTIVITY GROWTH 243
Henk Kox

1. Introduction 243
2. Baumol disease? 244
3. Business services industry as a provider of intermediary inputs 247
4. Do measurement problems in business services industry affect macro-economic productivity? 248
5. Knowledge spillovers by business services industry 250
6. Stagnating productivity growth in business services no fait accompli 253
7. Policy options for strengthening productivity and innovation 259
8. Conclusions 261
References 261

CHAPTER 14 INCREASING PRODUCTIVITY THROUGH INNOVATION AND ENTREPRENEURSHIP IN BUSINESS SERVICES 265
Mark Visscher, Rob Becker and Menno van Dijk

1. Introduction 265
2. Determining productivity growth in the business services sector 266
3. Understanding the impact on other sectors’ productivity growth 270
4. The importance of market dynamism as a driver of productivity growth 272
5. Credible entrants and external triggers as drivers of market dynamism 275
6. The role of business innovation 279
7. Conclusions 282
References 284
CHAPTER 15 THE OECD GROWTH STUDY: IMPLICATIONS FOR THE NETHERLANDS

Dirk Pilat

1. Introduction 285
2. Findings of the OECD Work 286
   2.1. Growth diverged in the OECD area 286
   2.2. Labour utilisation plays a key role 286
   2.3. Education and training support labour productivity growth 288
   2.4. The role of investment 289
   2.5. Strengthening TFP growth 290
3. The role of fundamentals 300
4. Conclusions for policy 301
References 302

CHAPTER 16 A POLICY AGENDA FOR HIGHER PRODUCTIVITY GROWTH

Stephan Raes, George Gelauff, Luuk Klomp and Theo Roelandt

1. Introduction 306
2. Is higher productivity growth desirable? 306
3. An overview of the determinants 309
4. Is there a role for government? 312
5. Macro-economic stability and physical capital 313
6. Human capital 314
7. Innovation 316
8. ICT 317
9. Competition and creative destruction 318
10. Conclusion 319
   An agenda for productivity
   References 320
